

VisionSafe Corporation introduces.....

EVAS™ Test Tool

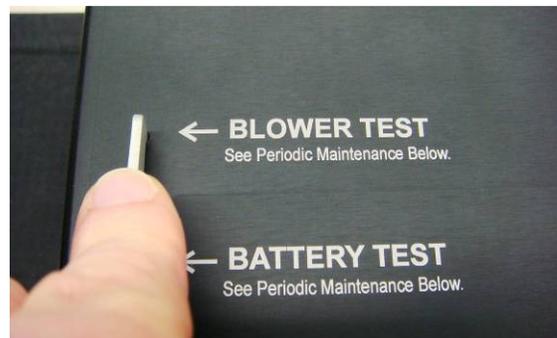

VisionSafe has created a new accessory for your EVAS™ unit, the EVAS™ Test Tool. This tool is designed to fit into the Blower Test and Battery Test holes on the front of the EVAS™ container, to make it easier to perform the Blower and Battery Check.

VSC P/N 2036, EVAS™ Test Tool, fits in the Blower and Battery Test holes on the front of your EVAS™ unit.

With very little pressure on the tool, the two test switches are activated simultaneously. You can perform the Blower and Battery Check quickly, with one tool, using one hand.

Please note that other test tools (hex keys, ballpoint pens, etc.) are still acceptable to perform the Blower and Battery Check. For a complete description of the Blower and Battery Check, see Chapter 2 of your ICA or user manual. The manuals are available on the Certification page of our website, www.visionsafe.com.

Blower and Battery Check can be performed with the handle facing either direction, whichever is convenient.

When not in use, the EVAS™ Test Tool can be stored in a convenient pocket under the cover strap label.

****Starting July 1, 2009, all new and serviced EVAS™ units will be equipped with the EVAS™ Test Tool.****
